

Year 1/2 term 3

Greenland Below zero

We have been learning about Greenland. We started learning about the world and the different zones and areas of the world. We used maps and atlases to find these areas before we looked at the country of Greenland. We researched it and found some interesting facts about it. We compared the way of living in Greenland to living in England.

We learnt a lot of information about the animals that live there and how they adapt to the weather conditions. We loved using the word 'blubber'!

We have also been learning about different habitats that we can find in England, as well as around the world. We identified the different climates and weathers, as well as the animals that live there.
